CONTENTS

- Overview
- Flowchart & Pseudo code
- User Story
- Product Backlog
- Project Plan
- Sprint

OVERVIEW

- **vehicle counting and detection and counting system.** It will be enough to work for **both the images or the video**, for the same,
- using OpenCV for doing all the image processing operations and for classification the **Vehicles haar cascade classifier for detecting and counting Vehicles.**
- address a video-based techniques for vehicle recognition and counting based on OpenCV technologies.
- The proposed technique uses the background subtraction method to discover forefront objects in video sequel. Several OpenCV techniques, including of an thresholding, the adaptive morphology operations, and hole filling are later applied in the series of detecting moving vehicles more accurately. At last, vehicle counting is done by utilizing virtual identification zones.

FLOWCHART

Pseudo code:

Step1: foreground extraction
Step2: Region of Interest
Step3: detection of a vehicle
Step4: counting of a vehicle

USER STORY

User Story ID	AS a <type of user>	I want to	So that I can
1	USER	openCV(Open Source Computer Vision Library)	Import openCV and do looping of a particular video
2	USER	Vehicle Detection	Detect the vehicle from the video
3	USER	Vehicle Counting	Count the number of vehicles using open

DEVELOPING ENVIRONMENT

SOFTWARE SPECIFICATION

- Operating System: Windows, Linux, MacOS
- Language: Python
- Library: openCV(Open Source Computer Vision)
- Browser: Mozilla Firefox, Microsoft Internet Explorer, Google Chrome, Opera browser, Apple Safari

HARDWARE SPECIFICATION

- Processor: Intel Core i5 or Core i7
- Storage: 128, 256, or 512 GB flash storage
- RAM: 8GB
